Your Embedded Linux Partner

Embedded Linux BSP Program

FASTER TIME TO MARKET

Our Embedded Linux BSP program will help you speed up your time to market for your new products and solutions.

INCREASED STABILITY

With our Embedded Linux BSP program, your product is guaranteed to run the latest stable Linux kernel, which will help you leverage a more stable and better tested system.

SIMPLICITY

Frees you from the complexities of porting Linux to your board and assures that your board is running the latest Linux kernel.

COST EFFECTIVENESS

At our price point, our Embedded Linux BSP program will minimize costs for launching your new product.

FOCUS ON YOUR DESIGN

With Bootbits Embedded Linux BSP program you will be able to focus on your design and product.

Launching new hardware for an embedded solution can be a very time consuming task. Our Embedded Linux BSP services will help you shorten your time to market and allow you to focus on the competitive aspects of your hardware.

At Bootbits we understand that your time is very valuable during a product bring-up. Our Embedded Linux BSP program is designed to free you from tedious Linux porting issues and will enable you to focus on the differentiating features of your product.

Our Embedded Linux BSP program provides the following components:

- Recent Linux 2.6 kernel ported to your target platform
- Set of applications in root file system for standard connectivity
- Porting of available open source drivers
- 3 months of free updates and support after delivery
- Excellent value for the price

- Latest stable Linux kernel
- Root file system for standard connectivity
- Porting of open source drivers
- Includes 3 months of support and updates

We have seen many customers spending weeks, if not months, of their valuable development time fixing Linux porting issues. These interruptions have resulted in delivery schedule delays.

Bootbits, with the new Linux BSP offering, has the right solution for you. By letting us take care of the porting process, your target platform will run a modern, recent Linux kernel, enhancing the stability of your solution.

Our Embedded Linux BSP program clearly offers and excellent value for the price!
